

Wind transducers to SILVA NEXUS instrument.

Wind Data

The back of the instrument

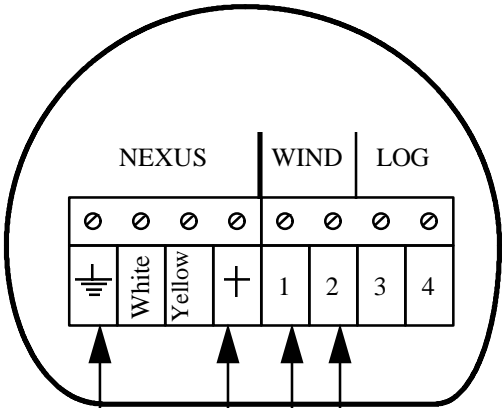

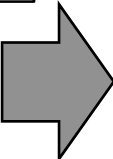

NOTE 1!

In most cases there is no problem using the older transducers to the newer instruments, **but** there are a small amount of transducers for S-4000 that has the wrong hardware.

So **do not** guarantee that it's going to work.

Wind transducer wires

NOTE 2!

To get correct wind angels you have to calibrate the transducer for NEXUS
Unfortunately, we are not able to calibrate some of the older transducers.
Look at page K1, and find out which transducers we can, or can not, calibrate.
